

Hello, LaTeX! I just tried enabling L^AT_EX language support and LaTeX Pre-viewer.

Now I am trying PingBang Hu's stuff. Fixed a comma.

I just installed the Conceal extension from Marketplace. Do Pingbang's settings work with it? $\int f(x)$.

It looks good so far!

α Huge! \aleph need to add one for aleph. I will need to add many.

I got snip pets but I need to figure out how to ensure math mode.

I deleted Pingbang's and copied the file the maker of Hypersnips V2 uses. \bar{h} it works hbar. \bar{h}

th γ α ε π Ξ Xi ξ $\sigma\tau\Sigma$ $\varphi\Phi\phi$

\aleph

\aleph

ε

\aleph_0

\aleph_0

I think I have Greek letters and the four supported Hebrew letters working
